

## AUTOMATIC BACK-WATER VALVE

Fiovalve has been  
approved by

The Fiovalve is a normally open automatic back-water valve which permits the free circulation of air throughout the plumbing system.

It will close automatically when sewer back-up occurs, thus isolating the entire house or building from sewage back-flow.

Fiovalve has been approved by CSA and Plumbing Authorities.

The Fiovalve due to its design, is installed in the building drain and complies with Plumbing Regulations as all codes require free movement of air throughout the plumbing system.

# Fiovalve

- » Is installed in the building drain to prevent sewer back-up through toilets, showers and floor drains.
- » Closes automatically when sewer starts to back-up or in case of a reverse flow in the line.
- » Has a clear transparent lid for visual inspection and easy accessibility for cleaning.
- » Does not restrict the withdrawal of a cleaning rod, since the gate remains in the open position, except when sewage backflow is in progress.
- » Is good news for home owners, building & house builders, insurance companies, municipalities and the plumbing industry.
- » May be installed in any sewer line, septic system, and non-basement house or building.

**Now you can install these state of the art products (Fiovalve & Fiodrain) singly or in combination in new and existing houses or buildings.**
